

# ELIMINATE FREQUENCY CONFLICTS BEFORE THEY CAUSE YOU MAJOR ISSUES

With Frequency Sentry™ you'll be notified by email when applications are filed with the FCC that meet your specified criteria.

Frequency Sentry is a frequency notification service that advises clients by email when applications are filed with the FCC that meet the client's specified search criteria. This provides our clients the opportunity to analyze and potentially eliminate frequency conflicts – before they cause major issues.

## PRICING

The Frequency Sentry service is provided as follows:

ITEM	UTC MEMBER	NON-MEMBER
Set Up Fee	\$500	\$1,000
Fee per channel per location	\$5	\$10

## SERVICE PROVIDED

Each week, UTC Spectrum Services downloads the pending application database from the FCC and scans it for new applications which meet the clients search criteria. For each "hit" Frequency Sentry provides the following information:

- Applicant Entity Name
- Application ULS File Number
- Application Coordinator Name and Coordination Date
- Application Frequency
- Distance to Target Client Record in km
- Distance to Target Client Record in miles
- Bearing to Target Client Record

Clients will specify channels by providing the data by using a web based tool at
